		ACCOUNT MANAGER			

Every day, Amanda uses the world's leading treatment against infection. Soap and water.

When it comes to fighting infection, the world's first preventive treatment is still one of the best. To combat the common cold, strep throat, or the flu, there's still nothing like washing your hands.

Wash hands frequently with soap and water—especially before preparing a meal or eating, after using the restroom, taking out the trash, or changing a diaper.

If you get an infection and are being treated with an antibiotic, take the full prescription; stopping before finishing a prescription may allow the infection to return.
